

# Immersion Heaters

Choose AccuTherm for superior immersion heaters at the most competitive pricing. Our high-quality immersion heaters feature nearly 100% energy efficiency and can perform in even the harshest and most hazardous environments. AccuTherm immersion heaters feature strict temperature control and high-pressure capabilities. Durable and heavy duty, immersion heaters can heat a wide array of oils, highly-viscous materials, water, solvents, gases, solutions and corrosive materials.

## FLANGE HEATERS

Flange immersion heaters are designed for use in tanks and pressurized vessels to heat both gases and liquids. A flanged immersion heater will typically mate with a companion flange that is either welded to a tank or in the case of circulation heaters, to a pipe body. AccuTherm flange heaters are designed to provide our customers with a long-lived, dependable, trouble-free heater for their application requirements. A properly designed flange heater will provide a high degree of efficiency as the energy that is generated is quickly dissipated directly into the medium that is being heated.

## SCREW PLUG

Screw Plug Immersion Heaters are ideal for immersion into liquids and all types of oils, where space and connections are a problem.

## OVER THE SIDE

AccuTherm's line of standard over the side immersion heater offers a wide variety of styles and shapes to meet nearly all needs. Whether you are heating a small pail of water or a large tank of caustic, we have the right product for the job. If standard designs do not match the application, we offer fast delivery on most custom designs. Since direct immersion is 100% efficient and over the sides require no tank modification these are the most easily used yet among the most effective means to heat your process.
