

Process Air Heaters Overview

- **Fintube® Heaters**
- **Finstrip® Heaters**
- **Circular Finstrip® Heaters**
- **High Temperature Duct Heaters**
- **Medium Temperature Duct Heaters**
- **Low Temperature Duct Heaters**

Heat processing applications vary widely from industry to industry. Curing, drying, heat treating, comfort heating, sterilizing and bonding represent just a few of the many uses for electrically heated air. Applications vary in temperature from super cool cryogenic to high temperatures up to 1200°F. Chromalox electric heaters can also be designed to heat special atmospheres such as argon or nitrogen. Special materials and custom designs are available for marine applications, power plants or hazardous applications.

Chromalox can supply individual finned elements for use in OEM equipment or entire duct heater assemblies where we have complete control over the product including the elements, frames and controls. Chromalox has earned an outstanding reputation for exceptional quality, reliability and long life.

Finned Heating Elements

Finstrip® Elements — Superior to open coil elements, the heating coil is completely encased in a metal sheath, minimizing a shock hazard due to accidental contact with the heater. The rigid metal sheath minimizes hot spots and electrical shorting, likely with open coil elements. Application temperatures to 565°F are typical using finned strip units.

Fintube® Elements — The finned tubular design provides the same benefits as the finned strip heater and additional features, allowing for special bending configurations to provide higher concentrations of installed kW for a given area. The elements can be supplied with bulkhead threaded fittings, and may include optional hermetically sealed terminals, or extra heavy wall thickness for use in atmospheres containing hazardous fumes or gasses. Element diameters of 0.315" and 0.475" are standard, with high temperature aluminum painted steel sheath and furnace brazed fins being the most common materials. Stainless Steel or MONEL® sheath and fins are also available for corrosive environments.

Duct Heater Assemblies

High Temperature — Type ADHT is designed to provide outlet air temperatures up to 1200°F using conservatively rated, low watt density, INCOLOY® tubular elements. The heater includes three inches of high temperature rated insulation below the mounting flange to reduce heat transfer to the wiring enclosure. The elements are prewired and

subdivided into 48 Amp maximum circuits in compliance with the National Electrical Code. The heater is provided with a Type "K" thermocouple attached to the sheath of one element to be used with a Chromalox high limit control.

Medium Temperature — Application temperatures to 750°F are common for ADH type duct heaters which feature INCOLOY® sheath tubular heating elements. These versatile units are fully assembled and prewired with the elements subdivided into 48 Amp maximum circuits in compliance with the National Electrical Code.

Low Temperature — Outlet air temperatures to 440°F are typical for types CAB, CABB and DAB which use finned strip heater elements in an assembly which is then inserted in and bolted to existing ductwork.

Process Air Heaters — Selection Guidelines

Type	Feature	kW Rating	Model	Page
Fintube®	0.475" Fintube®	0.47 - 10	FTS & FTI	E-3
	0.315" Fintube®	0.5 - 6.2	FTS & FTI	E-4
	0.475" Single End	0.5 - 4.3	SFTS & SFTI	E-5
	0.315" Single End	0.3 - 2.4	SFTS & SFTI	E-7
Finstrip®	Finstrip®	0.2 - 4.1	OTF	E-9
	Circular Strip	1.9 - 5.0	KSEF	E-11
Air Duct	Medium Temperature	5 - 270	ADH	E-14
	High Temperature	5 - 300	ADHT	E-15
	Low Temperature	6 - 100	CAB & CABB	E-17
	Round Duct	2.5 - 5	DAB	E-19

PROCESS AIR AND RADIANT

FT Series Fintube® Air Heaters Overview

- Many Sheath and Fin Materials Available
- 475 - 10,000 Watts
- 120, 240 and 480 Volt
- 750 to 900°F Max. Sheath Temp.

Applications

- Drying
- Heat Treating
- Annealing
- Load Banks
- Curing Ovens, Dryers, Ducts, etc.

Features

Versatile — Ideal for both comfort and industrial process air applications. Aluminum painted steel (FTS), MONEL® (FTI) or Stainless Steel (FTSS) sheath and fin material are available. Contact your Local Chromalox Sales office for price and availability.

Fins greatly increase surface area and permit faster heat transfer to the air, resulting in lower element surface temperatures.

Construction — Element is constructed like the standard tubular element with the addition of continuous spiral fins (4 - 5 per inch) permanently furnace brazed to the sheath.

High Watt Density permits use of fewer elements or higher concentration of installed kW for a given area.

Figure 1 — Dimensions (Inches)

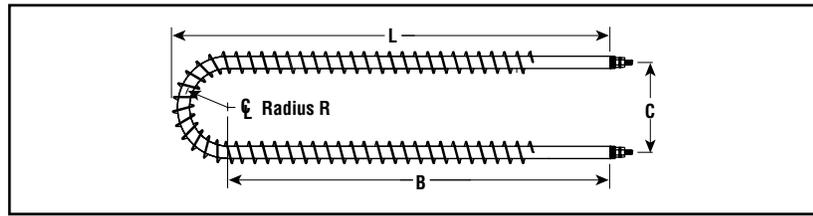

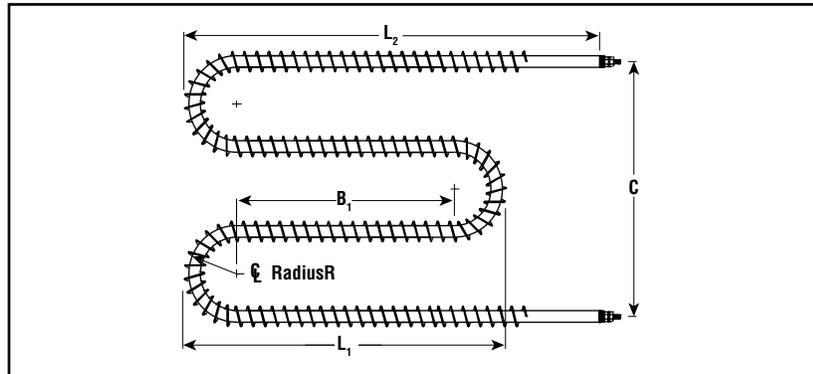

Figure 2 — Dimensions (Inches)

Easy Installation — Bending configurations can be designed to fit either round or rectangular ducts. Tight element bends are repressed in hydraulic presses after bending to assure recompaction of refractory material to eliminate hot spots and electrical insulation voids.

Power Connections should be made with alloy wire.

Overtemperature Protection — A high limit temperature cutout is recommended.

Bending — Fintube® elements may be field or factory bent according to the following parameters:

Factory & Customer Bending (In.)

Element Dia. (In.)	Min. Factory		Min. Customer	
	C	R	C	R
Figure 1				
0.315	2	1	2-5/16	1-5/32
0.475	2	1	3-3/8	1-11/16
Figure 2				
0.315	6	1	6-15/16	1-5/32
0.475	6	1	10-1/8	1-11/16

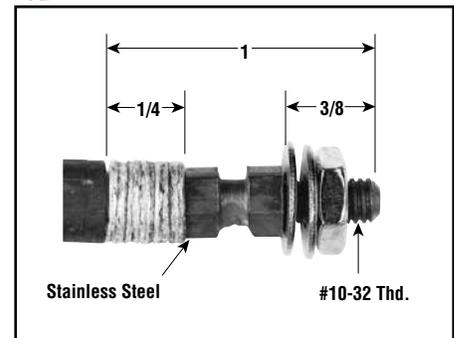

Note — The start of any bends should be no closer than 3-7/16" for 0.475" dia. or 3-5/8" for 0.315" dia. elements, from the end of the sheath to prevent the heating element/cold pin junction from being located in a bend.

Special Features — Sheath material (i.e. Stainless Steel), threaded fittings, length, diameter, volts, watts, special bends, terminals, terminal enclosures, brackets, spacers, etc. Contact your Local Chromalox Sales office for price and availability.

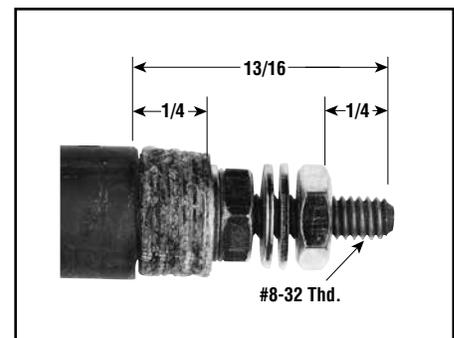

Standard Terminal Construction

Standard Terminal Construction — Type 3 terminals are standard on 0.315" diameter sheaths and Type 4 terminals for 0.475" diameter sheaths.

Type 3 Terminal — Dimensions (In.)

Type 4 Terminal — Dimensions (In.)

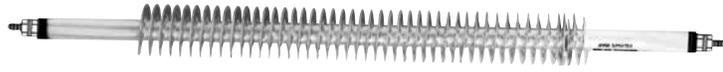

Special Terminal Construction — Many types of terminals are available to suit different applications. See Tubular section in this catalog for selection.

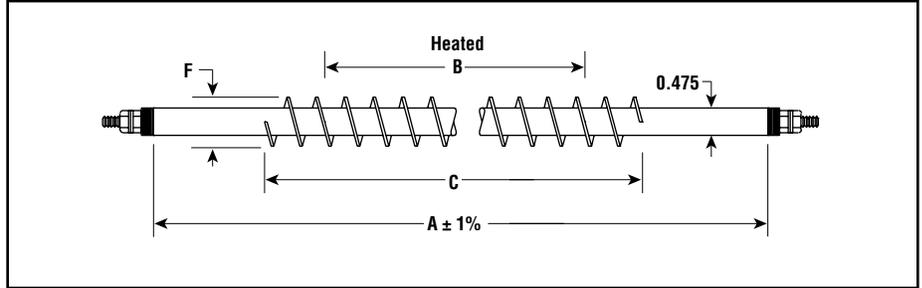

FTS & FTI .475" Dia. Fintube® Heaters

Dimensions (Inches)

- Steel Sheath (type FTS)
- MONEL® Sheath (type FTI)
- 475 - 10,000 Watts
- 120, 240 and 480 Volt
- 60 W/In²
- 750°F Max. Sheath Temp. (type FTS)
- 900°F Max. Sheath Temp. (type FTI)

Applications

Best suited for the following applications where space is limited.

- Drying
- Heat Treating
- Annealing
- Load Banks
- Curing Ovens, Dryers, Ducts, etc.

Advantages

The metal sheath isolates and protects the resistor wire from the environment. At the same time it maximizes heat transfer capability to the work. Fintube® elements can be bent to put the heat where it works best.

Fins greatly increase surface area and permit faster heat transfer to the air, resulting in lower element surface temperatures. High watt density permits use of fewer elements and a higher concentration of installed kW for a given area.

Fintube® heaters are ideal for both comfort and industrial process air applications.

Features

Type 4 Terminals — Standard. Integral parts of the element are of high strength to resist bending during tightening of the wiring connections. Type 4 terminal is a threaded extension of the cold pin. See standard terminal detail in the FT Series Overview.

Work Temperatures — See Allowable Watt Density & Heater Selection Graphs G-151 through G-156 in Technical section of this catalog.

Bending — Customer's minimum bending radius, see Factory and Customer Bending Table in the FT Series Overview.

Stainless Steel Sheath — Optional. Contact your Local Chromalox Sales office.

Special Features — Sheath material, threaded fittings, length, volts, watts, brackets, etc. Contact your Local Chromalox Sales office for price and availability.

SFTS & SFTI

.475" Dia. Single End Fintube® Heaters

- Steel Sheath (type SFTS)
- MONEL® Sheath (type SFTI)
- 500 - 4,350 Watts
- 120, 240 and 480 Volt
- 60 W/In²
- 750°F Max. Sheath Temp. (type SFTS)
- 900°F Max. Sheath Temp. (type SFTI)

Applications

Best suited for the following applications where space is limited.

- Drying
- Heat Treating
- Annealing
- Load Banks
- Curing Ovens, Dryers, Ducts, etc.

Advantages

Versatile — Ideal for both comfort and industrial process air applications.

Single-End Terminals simplify wiring and eliminate the need for return wire.

Install More Elements in Same Space as standard, double-end Fintube®.

No Bending required to put all terminals in the same plane.

Smaller Heating Duct or Chamber in some cases.

Construction — Element is constructed like the standard single-end tubular element with the addition of continuous spiral fins (4 - 5 per inch) permanently furnace brazed to the sheath.

Fins greatly increase surface area and permit faster heat transfer to the air, resulting in lower element surface temperatures.

High Watt Density permits use of fewer elements or higher concentration of installed kW for a given area.

Lead Wires, 10" long, with silicone-impregnated Fiberglas® sleeves. Maximum wire temperature is 200°C.

Leads are attached to terminals inside a ceramic terminal bushing.

Application Tips

Terminal Block should be on outside of duct or heating area.

Element Supports should be provided for every two feet of element length.

Work Temperatures — See Allowable Watt Density & Heater Selection Graphs G-151 through G-156 in Technical section.

Special Features — Sheath material, threaded fittings, length, volts, watts, brackets, etc. Contact your Local Chromalox Sales office for price and availability.

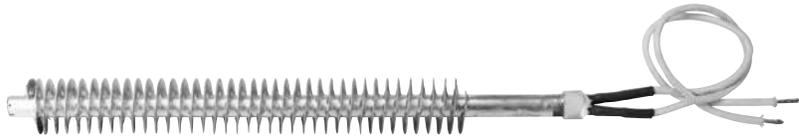

Bending is not recommended for single end elements. Contact your Local Chromalox Sales office.

Stainless Steel Sheath — Optional. Contact your Local Chromalox Sales office for price and availability.

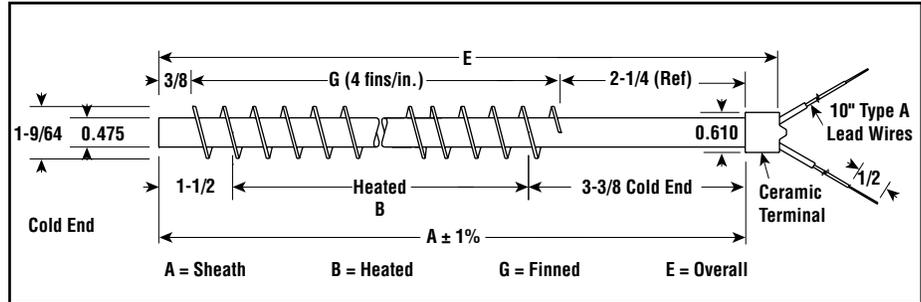

SFTS & SFTI

.315" Dia. Single End Fintube® Heaters

- Steel Sheath (type SFTS)
- MONEL® Sheath (type SFTI)
- 325 - 2,400 Watts
- 120 and 240 Volt
- 60 W/in²
- 750°F Max. Sheath Temp. (type SFTS)
- 900°F Max. Sheath Temp. (type SFTI)

Applications

Best suited for the following applications where space is limited.

- Drying
- Heat Treating
- Annealing
- Load Banks
- Curing Ovens, Dryers, Ducts, etc.

Advantages

Versatile — Ideal for both comfort and industrial process air applications.

Single-End Terminals simplify wiring and eliminate the need for return wire.

Install More Elements in Same Space as standard, double-end Fintube®.

No Bending required to put all terminals in the same plane.

Smaller Heating Duct or Chamber in some cases.

Construction — Element is constructed like the standard single-end tubular element with the addition of continuous spiral fins (4 - 5 per inch) permanently furnace brazed to the sheath.

Fins greatly increase surface area and permit faster heat transfer to the air, resulting in lower element surface temperatures.

High Watt Density permits use of fewer elements or higher concentration of installed kW for a given area.

Lead Wires, 10" long, with silicone-impregnated Fiberglas® sleeves. Maximum wire temperature is 200°C.

Leads are attached to terminals inside a ceramic terminal bushing.

Application Tips

Terminal Block should be on outside of duct or heating area.

Element Supports should be provided for every two feet of element length.

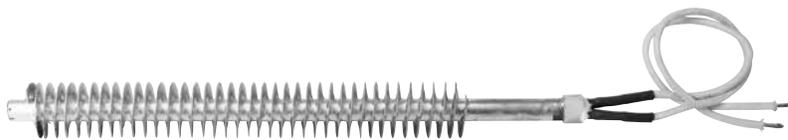

Work Temperatures — See Allowable Watt Density & Heater Selection Graphs G-151 through G-156 in Technical section.

Special Features — Sheath material, threaded fittings, length, volts, watts, brackets, etc. Contact your Local Chromalox Sales office for price and availability.

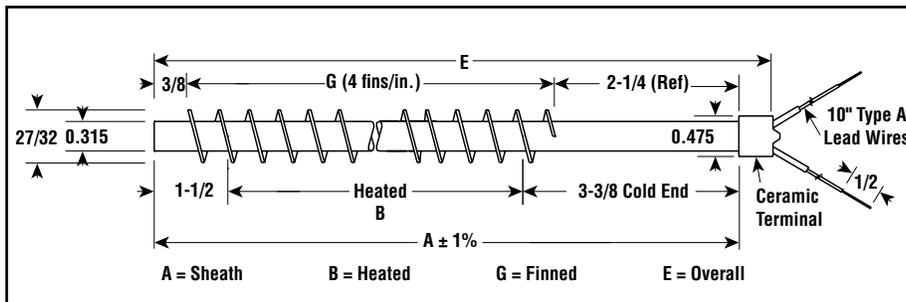

Bending is not recommended for single end elements. Contact your Local Chromalox Sales office.

OTF Finstrip® Air Heater

- Rust-Resisting Iron or Chrome Steel Sheath
- 250 - 4,150 Watts
- 120 and 240 Volt
- Single Phase
- 225 - 565°F Max. Work Temp.
- 1-1/2" Strip with Fins 2" Wide

Dimensions (Inches)

Applications

- Mount across Air Stream within Forced Air Ducts
- Use in Dryers, Ovens and other Process Air Heating Equipment
- Comfort Heating in Ducts, Load Banks and Humidity Controls
- Many Air Blast and Convection requirements can be accommodated by the wide range of lengths, wattages and watt densities available.

Application & Selection Guidelines

Maximum Work Temperatures — Finstrip® elements can generally be used in the applications above, at maximum temperatures, without exceeding their capability, if properly installed according to instructions packed with heater.

Air Velocity (Ft./Sec.)	Max. Outlet Air Temp. (°F)	
	Iron Sheath	Chrome Steel Sheath
Free Air	225	315
16	460	565

Note — Maximum temperatures are based on 15 W/In² density for iron sheath and 20 W/In² density for chrome steel sheath. If elements have a lower watt density, work temperature may be increased; if watt density is higher, work temperature should be lower.

See Allowable Watt Density & Finstrip® Heater Selection Graphs G-107S and G-108S in the Technical section of this catalog.

FINSTRIP®

OTF Finstrip® Air Heater (cont'd.)

Features

Durability is assured by rugged Chromalox strip heater with locked-on aluminized steel fins.

Rapid Heat Transfer to air from large finned area.

Large Selection of lengths, wattages and watt densities.

Options

Secondary Insulation Bushings are needed at each end of Finstrip® elements when connected in series on line voltages 300V and above. To accommodate bushings, a 17/32 x 11/16" mounting hole in tabs should be specified for elements. A secondary bushing set (PCN 255716) should be specified. Each set includes two bushings and hardware for one heater.

Removable Terminal Covers (OT-AC-1) — Shipped unassembled (PCN 129242).

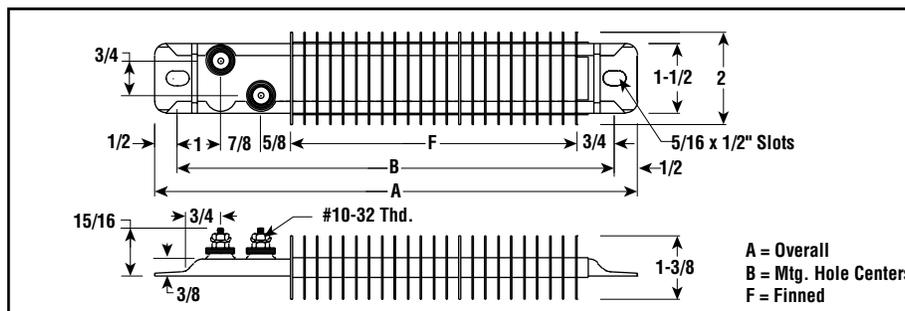

Ceramic Post Terminal Insulators — Nickel plated steel hardware (PCN 259805). Stainless Steel hardware (PCN 255732).

Extra Long Finstrips — Available in 48, 54, 64 or 72" length.

MONEL® Sheath and Fins — Contact your Local Chromalox Sales office for price and availability.

KSEF

Preformed Circular Finstrip® Air Duct Heater

- Rust-Resisting Iron or MONEL® Sheath and Fins
- 1,950 - 5,000 Watts
- 120 and 240 Volt
- Single Phase

Dimensions (Inches)

Applications

- Heat moving Air or Gas in Round Ducts
- Booster Heater in Process and Comfort Heating Ducts
- Convert existing Forced Air Dryers and Ovens

Application & Selection Guidelines

Maximum Work Temperatures — Finstrip® elements can generally be used in the following applications at maximum temperatures, without exceeding their capability, if properly installed according to instructions packed with heaters.

Air Velocity (Ft./Sec.)	Max. Outlet Air Temp. (°F)	
	Iron Sheath	MONEL® Sheath
4	—	250
9	150	370
16	250	450

Note — Maximum temperatures are based on 25 W/in². If elements have a lower watt density, work temperature may be increased; if watt density is higher, work temperature should be lower.

Note — See Allowable Watt Density & Heater Selection Graphs G-107S and G-108S in the Technical section of this catalog.

Features

Durability is assured by rugged Chromalox strip heater with locked-on fins.

Rapid Heat Transfer to air from large finned area.

Nested Elements — Elements may be nested.

Open Construction — Requires mounting brackets to be fabricated by user.

FINSTRIP®

ADH & ADHT Series

High Temperature Air Duct Heaters

- 5 - 300 kW
- 240 and 480 Volt, Three Phase (Up to 600V Available)
- INCOLOY® Sheath Elements
- 800°F Max. Outlet Air Temp. (ADH)
- 1200°F Max. Outlet Air Temp. (ADHT)

Applications

- Heat Air for Drying and Curing operations up to 1200°F Air Temperature
- Heat Treating
- Reheating or Dehumidification
- Aircraft Manufacturing
- Autoclaves
- Annealing
- Drying
- Paint Baking or Drying
- Sterilizing

Features

Long Life Metal Sheath Tubular Elements

— High grade INCOLOY® sheath material for excellent corrosion/oxidation resistance at high operating temperatures.

Sturdy Metal Sheath Elements minimize problems associated with open coil resistance wire units.

High Purity Magnesium Oxide — The elements are filled with highest purity blends of magnesium oxide refractory (MgO) compacted to a rock hard density to ensure good thermal conductivity and electrical insulation resistance.

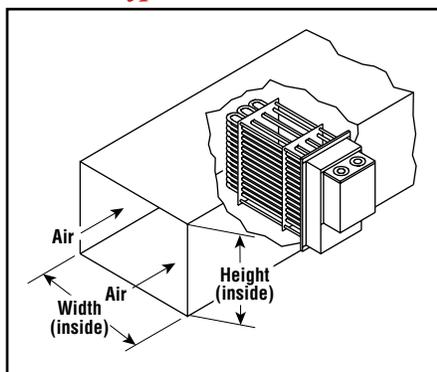

Superior Grade Resistance Wire — The heart of each heating element is made of high quality resistance wire for maximum life.

Low Watt Density Resistor Wire — Watt density on the heating coil is designed for low watt density operation by increasing the coil and wire diameter, and length of resistance wire to give maximum surface area and low operating coil surface temperature — providing longer coil life.

Superior Construction at Element Bends — All element bends are repressed in hydraulic

ADH — Typical Installation

presses after bending to assure recompaction of refractory material to eliminate hot spots and electrical insulation voids.

Low Wiring Compartment Temperatures

— Made possible by the addition of a one inch thick blanket of insulation in the terminal box. High temperature ADHT units include an additional three inches of insulation to help reduce duct heat losses.

Meets NEC Wiring Requirements — Heaters are subdivided into 48 Amp maximum circuits in compliance with the National Electrical Code.

Easy Access to Field Wiring Terminals

— Terminal housing is completely removable for maximum access to field wiring terminals. Individual terminal blocks with threaded stud type terminals are provided for each circuit to permit quick positive attachment of circuit wiring conductors.

Dirt & Dust Resistant Terminal Housing

— Made of solid heavy gauge aluminized steel, rather than perforated metal, to resist dirt and dust accumulation on the electrical connections and thus provide longer service life.

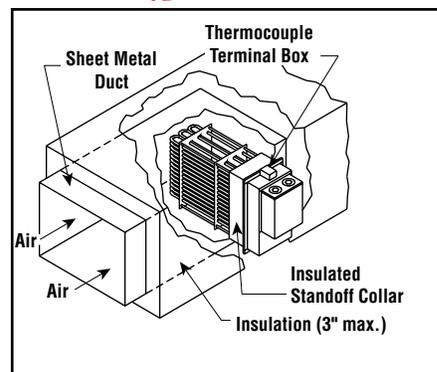

Flange Mounting Gasket — Packed separately with each duct heater to minimize air leakage between the flange and air duct.

Tandem Mounting — Multiple heaters may be mounted in tandem with each other provided the maximum recommended outlet air temperature is not exceeded.

Element Support Plate — A stainless steel element support plate is held in place with Stainless Steel support rods to provide structural stability.

ADHT — Typical Installation

Pressure Drop — See Pressure Drop Curve G-227-2 under Air & Gas Data in the Technical section of this catalog.

Options

Gas Tight Design — Threaded fittings with fiber washers attach heating elements to flange — prevents leakage of ducted air into terminal housing.

Overtemperature Protection — Thermocouple welded to the element sheath surface and wired to a terminal block allows for accurate overheat protection. Standard Type K thermocouple on ADHT high temperature heaters.

Thermocouple Sensor for air temperature control.

Moisture or Explosion-Resistant Terminal Enclosures are available for those applications requiring special terminal protection. Explosion-Resistant enclosure design meets requirements for Class I, Div.2, Group D area but does not carry any third party listing.

CAUTION — If atmosphere in duct contains combustible gases or vapors, sheath temperatures must be limited not to exceed 80% of the ignition temperature of the gas or the vapor involved. Check with your Local Chromalox Sales office for recommendations.

Special Ratings, Sizes or Construction Materials — Chromalox can fabricate a duct heater to your special rating, physical size or other specifications.

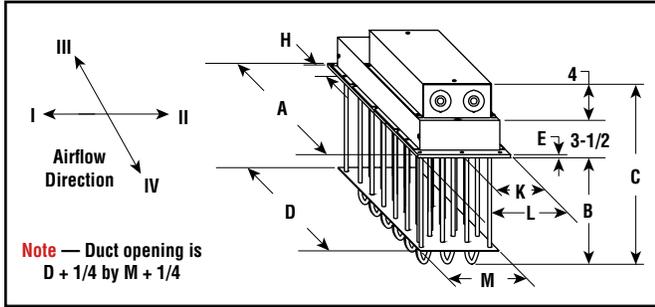

Application Assistance — Chromalox will assist you in the design or selection of equipment. Contact your Local Chromalox Sales office.

All Heaters can be mounted in any position; top, side or bottom entry. In high ambient temperature operations, least corrosive action and least oxidation to the terminals will occur if heaters are mounted with terminals in the coolest possible ambient, usually on bottom or side of duct. Minimum duct size is A or L dimension plus 3/8" and B dimension plus 1-5/8", and 3" for insulation housing.

Electrical Table for ADH and ADHT Duct heaters

For selecting the proper control panel for use with the ADH and ADHT duct heaters, the number of circuits is of crucial importance. The Electrical table, at right, should be used for the purpose of determining the number of circuits in the panel.

Field Wiring — Refer to Graph ADHTB Terminal Box Temperature field wiring selection guide in the technical section of this catalog (Section I).

Gas tight construction should be considered if the gas pressure in the duct is at a higher relative pressure than in the terminal box which is at room air pressure. Refer to ADH/ADHT terminal box temperature and field wiring selection guide showing the temperature in the terminal box at various gas outlet temperatures. This guide is graph ADHTB located in the Air and Gas Heating section in the technical pages in the back of the catalog.

AIR DUCT

ADH High Temperature Air Duct Heaters

- 5 - 270 kW
- 240 and 480 Volt, Three Phase (Up to 600V Available)
- INCOLOY® Sheath Elements
- 30 W/In²
- 800°F Max. Outlet Air Temp.

Construction

Rugged Construction Elements — Sturdy 0.475" diameter INCOLOY® sheath tubular elements are mounted to a heavy 1/4 or 3/8" thick steel flange. Element fasteners allow for easy replacement.

Corrosion-Resistant Terminal Enclosure — The element terminal enclosure is made of 16 gauge high-temperature, corrosion-resistant steel and includes 1" thick high-temperature insulation to minimize temperatures in the wiring area.

Wiring Box — The 16 gauge wiring box encloses individual terminal blocks for each circuit. Threaded stud type terminals are provided to permit quick positive attachment of circuit wiring conductors.

Mounting

All Heaters can be mounted in any position; top, side or bottom entry. In high ambient temperature operations, least corrosive action and least oxidation to the terminals will occur if heaters are mounted with terminals in the coolest possible ambient, usually on bottom or side of duct. Minimum duct size is A or L dimension plus 3/8" and B dimension plus 1-5/8".

Application & Selection Guidelines

Maximum Work Temperatures — Type ADH heaters can generally be used at the following maximum temperatures, provided the minimum air velocity is maintained uniformly through the heater.

Air Velocity (Ft./Sec.)	Max. Outlet Air Temp. (°F)
4 - 36	800

Note — Maximum temperatures are based on 30 W/In². If elements have a lower watt density, work temperature may be increased; if watt density is higher, work temperature should be lower.

Note — An airflow type switch or other device is recommended to protect against loss of airflow.

Note — See Allowable Watt Density & Heater Selection Graphs in the Technical section of this catalog.

ADHT High Temperature Air Duct Heater

- 5 - 300 kW
- 240 and 480 Volt, Three Phase (Up to 600V Available)
- INCOLOY® Sheath Elements
- 20 W/In²
- 1200°F Max. Outlet Air Temp.
- Insulated Standoff Collar

Type ADHT

Construction

Rugged Construction Elements — Sturdy 0.475" diameter INCOLOY® sheath tubular elements are mounted to a heavy 1/4 or 3/8" thick steel flange. Element fasteners to allow for easy replacement.

Corrosion-Resistant Terminal Enclosure — The element terminal enclosure is made of 16 gauge high-temperature, corrosion-resistant steel and includes 1" thick high-temperature insulation to minimize temperatures in the wiring area.

Wiring Box — The 16 gauge wiring box encloses individual terminal blocks for each circuit. Threaded stud type terminals are provided to permit quick positive attachment of circuit wiring conductors.

Insulation Housing — Includes 3" of high temperature thermal insulation to reduce duct heat conducted into terminal enclosure.

Overtemperature Protection — A type K thermocouple is welded to the element sheath surface to sense element temperature, and is wired to a terminal block located on the outer surface of the terminal housing.

Mounting

Generally mounted to a field fabricated stand off collar from the ductwork to position the heater such that the 3" insulation housing is in the same plane as the duct insulation.

All Heaters can be mounted in any position; top, side or bottom entry. In high ambient temperature operations, least corrosive action and least oxidation to the terminals will occur if heaters are mounted with terminals in the coolest possible ambient, usually on bottom or side of duct. Minimum duct size is A or L dimension plus 3/8" and B dimension plus 1-5/8", and 3" for insulation housing.

Application & Selection Guidelines

Maximum Work Temperatures — Type ADHT heaters can generally be used at the following maximum temperatures, provided the minimum air velocity is maintained uniformly through the heater. Maximum temperatures are based on 20 W/In².

Air Velocity (Ft./Sec.)	Max. Outlet Air Temp. (°F)
4	1050
9	1100
16	1150
25	1200
36	1200

Note — See Allowable Watt Density & Heater Selection Graphs in Technical section.

Note — An airflow type switch or other device is recommended to protect against loss of airflow.

CAB & CABB

Low Temperature Air Duct Heaters

- Side Terminals (type CAB)
- Bottom Terminals (type CABB)
- 6 - 100 kW
- 120, 208, 240 and 480 Volt
- 1 or 3 Phase
- Rust-Resisting Iron or Chrome Steel Sheath Elements
- 440°F Max. Outlet Air Temp.

Applications

- Sole Heat Source
- Booster Heater in Process and Comfort Heating Ducts
- Convert existing Forced Air Dryers and Ovens
- With Blower and Duct, can be used to Fabricate simple Forced Air Drying Unit

Features

Simple Duct Transition Sections may be used to adapt standard heater sizes to various duct sizes to increase air velocities for better heat transfer, lower sheath temperature and longer element life.

Field Wiring Terminals — Heavy duty 3/8" diameter bolts of either brass (iron sheath units) or Stainless Steel (chrome steel sheath units) with necessary hardware are provided for field wiring connections. Terminals are located on the side for CAB units and on the bottom for CABB units, and should be on the outside of ducting.

Fins of aluminized steel are provided to improve heat transfer to the air.

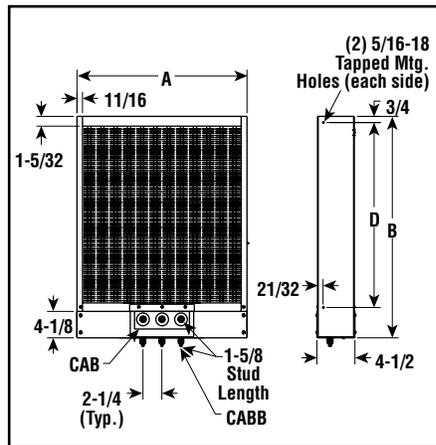

Elements are individually replaceable.

Terminal Cover Option is available to prevent accidental contact with live electrical terminals (PCN 269720), one (1) required per circuit.

MONEL® Sheath and MONEL® Fins are available for humid conditions. Model TDH heaters, using Fintube® elements are also available. Contact your Local Chromalox Sales office.

Dimensions (Inches)

Construction

Rugged Finstrip® Elements are mounted in a sturdy steel frame with narrow side of elements and fins facing the air flow.

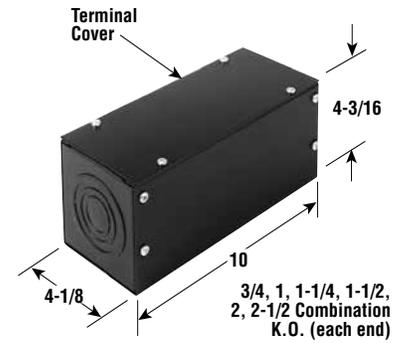

Finstrip® Elements, Exclusive Construction — High-quality, coiled resistor wire is uniformly spaced over the width and length of the Finstrip® element, then embedded in high-grade refractory material which insulates the wire and transfers heat rapidly. Refractory is then compressed to rock hardness and maximum density under tremendous hydraulic pressure to improve heat transfer from coil to sheath. Elements are oven baked at high temperatures to semi-vitrify and mature the refractory. Sheath material is either rust-resisting iron or chrome steel.

Sturdy Steel Frame — 14 gauge cold rolled steel painted with high heat resisting black enamel paint.

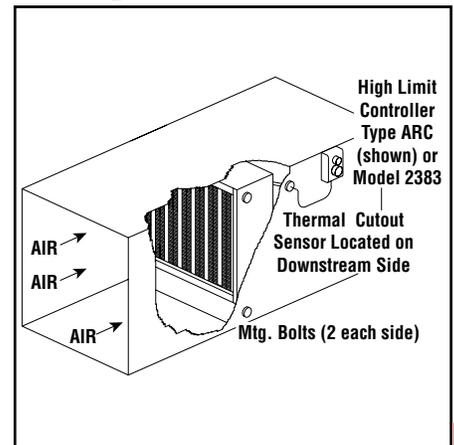

Internal Electrical Connections are made using a combination of buss bars and jumper straps consisting of either Manganese-Nickel or MONEL®.

Mounting

Always install heaters in duct work with terminal box on bottom of heater. Type CAB units should have field wiring terminals facing upstream to provide maximum cooling affect. Secure to duct work using mounting holes on both vertical sides of heater.

Overtemperature Protection

Application & Selection Guidelines

Selection Heater Size — Refer to Technical section for examples on determining kW requirements. For quick estimating purposes, the following formula may be used for air at standard conditions:

$$kW = \frac{SCFM \times \text{Temp. Rise } (^\circ F)}{3000}$$

Maximum Work Temperatures — Type CAB and CABB heaters can generally be used at the following maximum temperatures, provided the minimum air velocity is maintained uniformly through the heater.

Air Velocity (Ft./Sec.)	Max. Outlet Air Temp. (°F)	
	Iron Sheath	Chrome Steel Sheath
4	—	200
9	90	330
16	220	440

Note — Maximum temperatures are based on 26 W/In². If elements have a lower watt density, work temperatures may be increased; if watt density is higher, work temperatures should be lower.

Note — See Allowable Watt Density & Heater Selection Graphs and Pressure Drop Curve G-112S1 under Air & Gas Heating Data in the Technical section of this catalog.

Note — The volume of air being circulated along with the free area for air flow (in table above) will enable you to calculate the air velocity over the heater.

DAB

Round Low Temperature Air Duct Heater

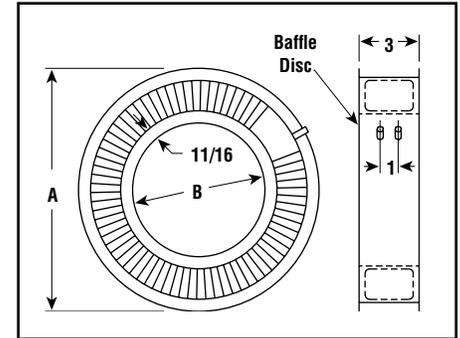

- 2.5 - 5 kW
- 240 Volt
- Single Phase
- Rust-Resisting Iron or MONEL® Sheath Elements

Applications

- Use in Dryers, Ovens and other Process Air Heating Equipment
- Comfort Heating in Ducts, Load Banks and Humidity Controls
- Sole Heat Source
- Booster Heater in Process and Comfort Heating Ducts

Dimensions (Inches)

Construction

Rugged KSEF Koilfin® Elements UL Recognized and CSA Certified, are enclosed in a spun steel round frame.

Element — Rust-Resisting Iron or MONEL® sheath.

Mounting Gasket — Furnished with each heater to minimize air leakage between the heater and the mounting surface or between heaters.

Baffle — Steel baffle furnished to close the center opening. When a multiple of units are interconnected, only the first and last heater are closed.

Features

Easy Installation in Round Ducts — Flange permits easy ganging of units to augment heating capacity.

Air is Forced Over Elements Only — The center opening of all DAB units may be closed with a sheet steel baffle furnished with the unit.

Application & Selection Guidelines

Maximum Work Temperatures — Finstrip® elements can generally be used at the following maximum temperatures, without exceeding their capability, if properly installed according to instructions packed with heaters.

Air Velocity (Ft./Sec.)	Max. Outlet Air Temp. (°F)	
	Iron Sheath	MONEL® Sheath
4	—	250
9	150	370
16	250	450

Note — Maximum work temperatures are based on 25 W/In². If elements have a lower watt density, work temperature may be increased; if watt density is higher, work temperature should be lower.

Note — See Allowable Watt Density & Heater Selection Graphs in Technical section.

Process Technologies

Process Air Heating

In addition to our pressurized air or gas circulation heaters, described on previous pages, Chromalox designs and manufactures equipment to be installed on ducts and to heat air before its introduction into processes. Standard design duct heaters can be supplied for baking ovens up to 200°C as well as drying ovens.

Chromalox can design and supply heaters and controls for special applications and customer requirements.

Special criteria may include any of the following: High temperatures (up to 700°C), corrosive fluids, Slight overpressure and slight vacuum, vibration or seismic resistant, special voltage, high output capacity. etc.

Our Capabilities

Heating Elements

- With or without fins for heat dissipation
- Materials:
 - Stainless Steel 304L /316L /321
 - INCOLOY 800/825
 - INCONEL 600
 - Uranus 86
 - Other metals according to the characteristics of the surroundings (temperature, corrosion risks)

Casing:

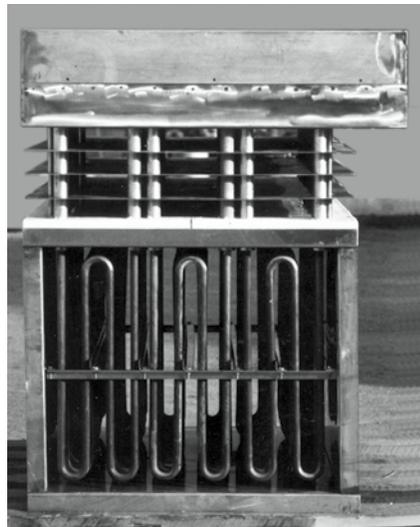

- With or without thermal insulation
- Reinforcement for pressure, seismic, shocks and vibration loadings
- Connect/on Box:
 - Stood off for high temperature, with or without cooling fins
 - Waterproof up to IP55
 - For hazardous areas
- Materials:
 - Galvanized steel
 - Painted steel
 - Stainless Steel 304 /304L /316L
 - Other metals according to the characteristics of the surroundings (temperature, corrosion risks)

Process Radiant Heaters

Overview

- Metal Sheath, Medium Intensity & Medium Wavelength
- Wide Area Quartz Panels
- Ceramic Panels

Chromalox has been recognized as the predominate source of metal sheath radiant heaters since 1948. Since that time, radiant heat has become the preferred process heating method for a multitude of applications in various industries. This is due to the unique properties of the infrared heating process which provide a number of significant advantages over other conventional heat transfer methods.

High Efficiency — Infrared heaters create radiant energy to directly heat the product as opposed to a convection oven which is dependent on air circulation as the heat transfer medium. This results in more efficient energy usage and lower operating cost. By eliminating the air medium, radiant heating also reduces the losses associated with hot air ovens.

Shorter Oven Lengths — As a result of the greater heating rates, most products can be heated much more rapidly than in a convection oven. Due to shorter product heating cycles using radiant heat, less oven length is required to do the job. This can result in an oven length reduction of 30 to 50% as compared to convection oven designs.

Cleaner Environment — There are no dirty or contaminating products of combustion present with electric infrared heaters. Since infrared is not dependent on air as the heat transfer method, the air circulation in an infrared oven is kept at a minimum. The greater the volume of air circulated and the faster it is circulated,

the greater the dirt factor and the product rejects due to dirt. Powder coatings and light weight materials can be heated rapidly due to low volume of air and low velocities.

Close Product Temperature Control — Infrared heat can be easily controlled and directed. Electric infrared heaters can be “zoned” to provide a high heating zone in one zone and a lower heating rate in another. Infrared heaters are very responsive to control changes; accurate and consistent product temperature control to within extremely close tolerances are possible.

Lower Initial Cost — Due to the simplicity of an electric infrared heating system, initial costs and maintenance costs are lower.

When infrared is the method deemed most suitable for your application, the Chromalox product line provides the largest selection of elements, fixtures and controls. There are many factors to consider: size, heater response, heater efficiency and heater pricing. Chromalox is a major supplier of INCOLOY® sheath, ceramic, quartz panel and ceramic composite panel types of elements.

Process Radiant Heaters

Technical & Application Data

Radiation is the process by which energy is transmitted through space without significant loss. Radiant energy is transferred from source (emitter) to receiver (absorber) in the form of electromagnetic waves. Heat is the result of absorption of this radiant energy by the receiver.

Radiation differs from convection and conduction because it does not require the presence of a medium (solid, liquid or gas) to transmit energy from the source to its final destination. By eliminating the heat transfer medium, radiant heating also eliminates the losses associated with other methods. Therefore, radiant heating provides maximum efficiency for your application.

The **Electromagnetic Spectrum** covers the range of wave lengths of radiant energy. The infrared portion of the spectrum (0.72 to 1000 microns) includes those wavelengths which will produce heat upon being absorbed by an object (see Figure 1). The radiant energy, or wavelength, of an infrared element depends on its temperature: the higher the temperature, the shorter the peak wavelength. Infrared wavelengths are longer than visible light but shorter than microwaves. The energy output of a radiant source depends upon the absolute temperature of the source, raised to the fourth power. As source temperature increases, heating intensity becomes very great. The useful wavelengths for industrial applications are from 1 to 10 microns.

Infrared radiation is similar to visible light. It travels through space at the speed of light (186,000 miles/sec), moves in a straight line, can be focused by optical reflectors, will travel through a vacuum, and is absorbed, transmitted or reflected by objects or materials.

In order to heat a product, the waves must be absorbed. Usually less than 10% of the waves are reflected, and the other 90% is either absorbed by or transmitted through the material. The best way to determine the absorption efficiency of the product is through testing.

Radiant heating is suitable where immersion or direct contact heating is impossible, impractical or undesirable. When infrared is the method deemed most suitable for your application, the Chromalox product line provides the largest selection of elements, fixtures and controls. You should find the exact radiant heater which will best meet your

Figure 1 — Electromagnetic Spectrum

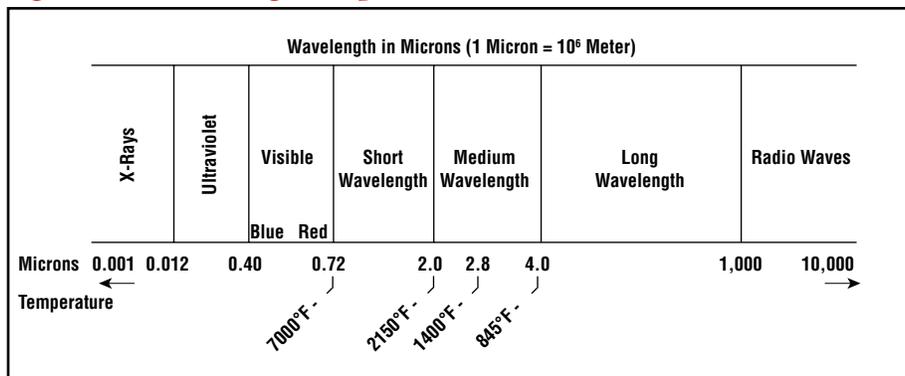

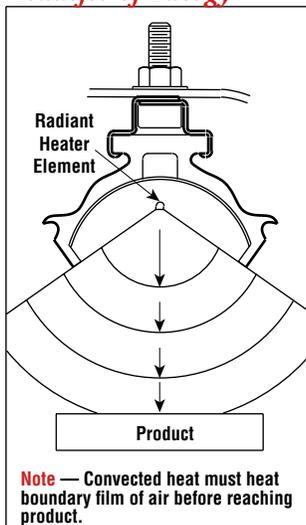

Figure 2 — Transfer of Energy

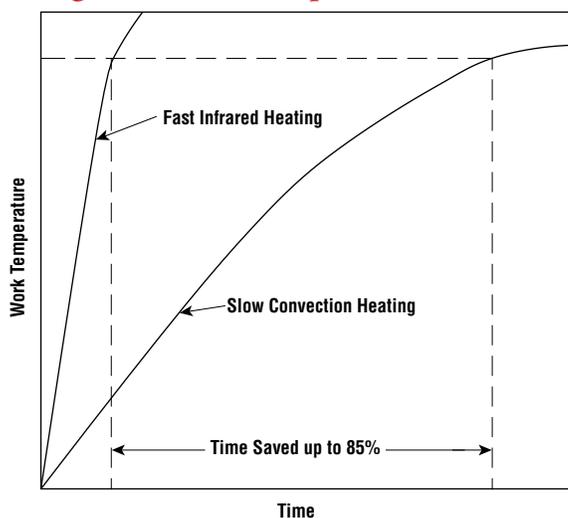

job requirement. If a specially designed heater is required, check with your Local Chromalox Sales office.

Radiation Vs. Convection — Convection and radiation are capable of transferring energy from a source to the work material without contact. They are naturally considered together when contact-free heating must be performed (see Figure 2). Due to the insulating effect of the boundary film of air which adheres tightly to all surfaces, gravity convection heating becomes exceedingly slow and more and more inefficient as production speeds increase (see Figure 3).

Forced convection of heated air directed at the work assists in breaking up the boundary film, but has the disadvantage of requiring enclosures and air handling equipment. If not recirculated, the spent heating medium must

Figure 3 — Work Temperature Vs. Time

be discharged with consequent heat loss. The desire for faster heating by this means tends toward higher velocities which may lead to higher oven losses and possible damage to delicate surfaces or contamination of the work by airborne dust.

One factor promoting efficiency of application in radiant heating is that radiation falling on an opaque surface is immediately absorbed and transformed into heat. The surface (and by thermal conduction, the internal body) is frequently heated above the surrounding ambient temperature. Where exhaust ventilation must be provided to remove volatiles, noxious fumes or moisture, lower ambient temperatures reduce the amount of heat carried away by the exhaust air and the necessity for extensive oven insulation.

Process Radiant Heaters Selection Guidelines

- **Metal Sheath, Medium Intensity & Medium Wavelength**
- **Wide Area Quartz Panels**

Selection Guidelines

The metal-sheath type heater is easily installed and may be operated in any position. The units may be mounted to form banks, tunnels or oven sections.

Chromalox offers heaters in two standard intensities. 1.83 kW per sq. ft. — type RAD. Adequate intensity for about 80% of all applications including finish curing.

3.66 kW per sq. ft. — type RADD, U-RAD and U-RAD-LT speed up webfed and conveyORIZED operations in which excessive temperatures

will not cause damage. Examples are water dry-off, shrink fitting and weld preheating.

Liquid-tight housings are available for single and double hairpin designs where moisture resistance is desired.

Wide area panels can give a wide, flat infrared radiation pattern where needed.

See the following selection guidelines to find more product information.

Process Radiant Heaters — Selection Guidelines

Type	Feature	kW Rating	Model	Page	
RAD Series	Mounting Methods			E-26	
Metal Sheath/ Medium Wavelength/ Medium Intensity	Single Element - 1.83 kW/Ft ²	0.4 - 4.5	RAD	E-27

RAD Series Radiant Heater Mounting Methods

- Single Heater Mounting
- Flat Heater Banks
- Large Oven Sections
- Formed Ovens

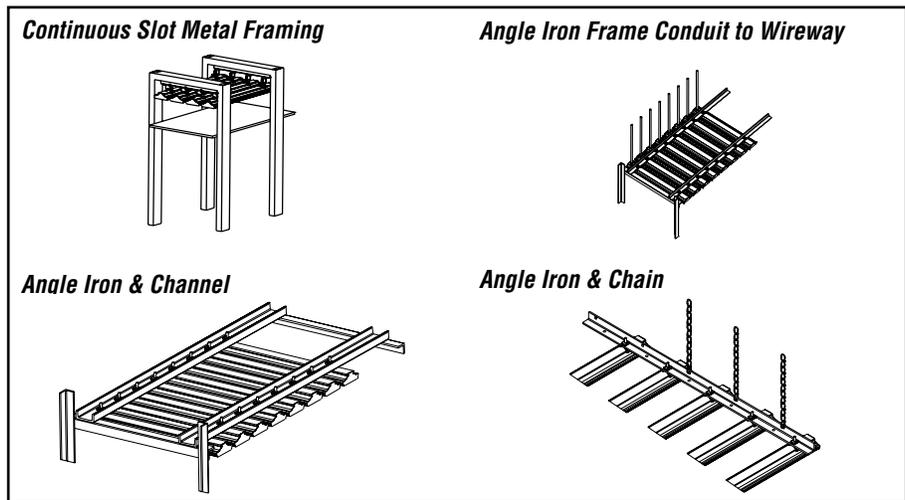

Chromalox radiant heaters are inherently easy to put to work. These heaters are designed as heater modules with features that provide the greatest flexibility in application. A broad choice of physical lengths and ratings is available. Modules can be locked together with hinge-like connectors to create various shaped tunnel structures. Rugged heater case permits use with common structural materials as framing for heater banks using provided heater mounting clamp.

Temperature controls, contactors, other control equipment and wiring accessories can be purchased with heaters to fill your electrical needs. Framing hardware and brackets must be obtained from your local supplier.

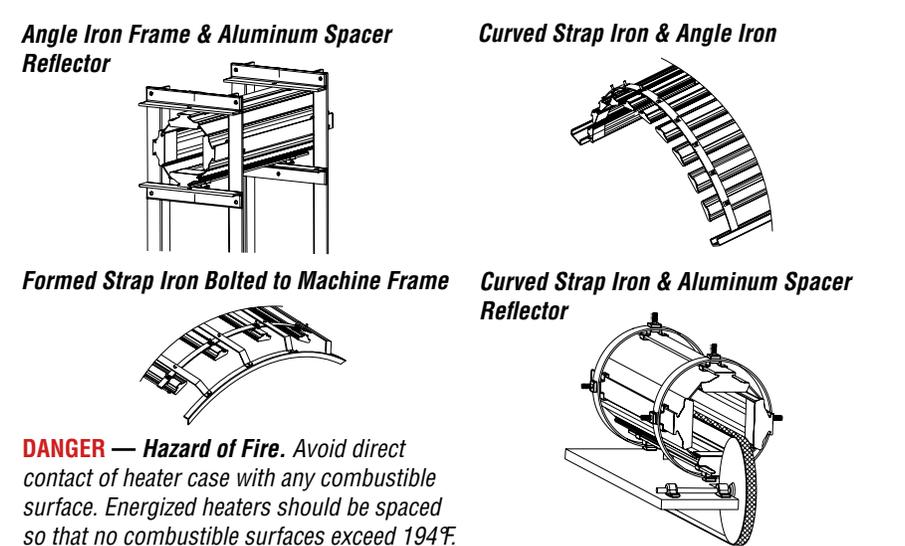

Single Heater Mounting

Flat Heater Banks

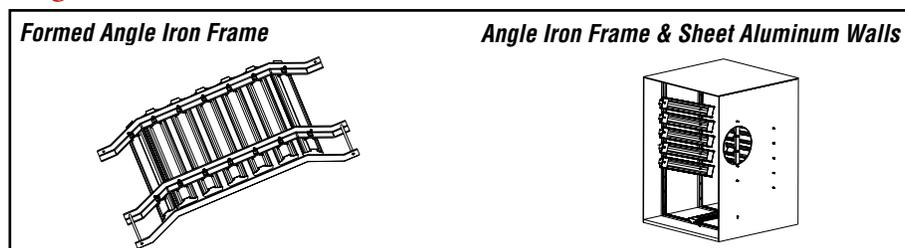

Formed Ovens

DANGER — **Hazard of Fire.** Avoid direct contact of heater case with any combustible surface. Energized heaters should be spaced so that no combustible surfaces exceed 194°F.

Large Oven Sections

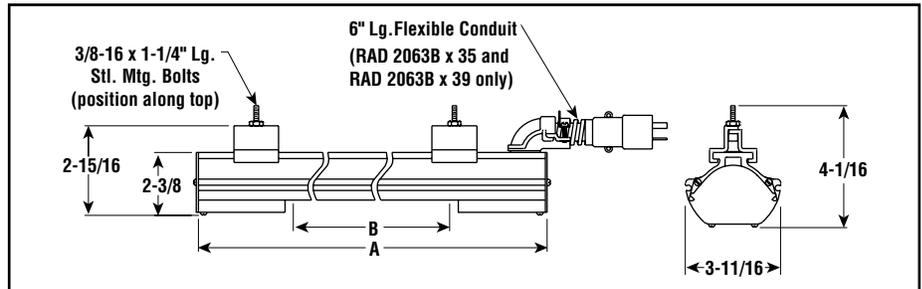

RAD

Single Element Radiant Heater

- 1.83 kW/Ft²
- 0.4 - 4.5 kW
- 120, 208, 240, 275 and 480 Volt
- 3/8" Dia. INCOLOY® Sheath Elements (Type RTU)
- 1500°F Max. Sheath Temp.

Dimensions (Inches)

Applications

- Finish Curing
- Latex and Resin Curing
- Plastics Processing
- Ink Drying
- Textile and Non-Woven Fabric Manufacturing
- Paper and Paperboard Manufacturing
- Food Processing
- Ceramic Drying

Features

Complete, Ready-to-Connect Assembly available in various lengths to accommodate work of varying dimensions.

Movable Mounting Clamps and Bolts are supplied to accommodate many mounting configurations such as banks, tunnels and oven sections.

Process Temperature Control — Radiant heater output may be controlled with Chromalox SCR Power Controllers, Percentage Timing Input Controls and Non-Contact Temperature Sensors. See the Controls section of this catalog.

Additional Sizes and Ratings — Contact your Local Chromalox Sales office for price and availability.

Single Ended Wiring — Heaters may be furnished single-end wired with 18" leads as standard. Add the suffix SE to model number.

Construction

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types.

Rigid Extruded Aluminum Housing helps protect heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Companion Reflector — Optional radiant companion reflectors improve oven efficiency. See Radiant Accessories in this section.

Pipe Plug — Used to close tapped wiring entry holes. See Radiant Accessories in this section.

Note: Model RAD heaters are not listed for use in fixed electric space heated applications under NEC 424. If they are to be used in such applications, installation must be approved by local code enforcement authorities.

Stock Status: S = stock NS = non-stock
To Order—Specify model, PCN, kW, volts, quantity, optional grille and replacement elements (if needed).

1. Refer to Tubular Heaters section.
2. Includes 6" BX and two-prong plug.
3. See Accessories in this section for ordering information.

RADD Double Element Radiant Heater (cont'd.)

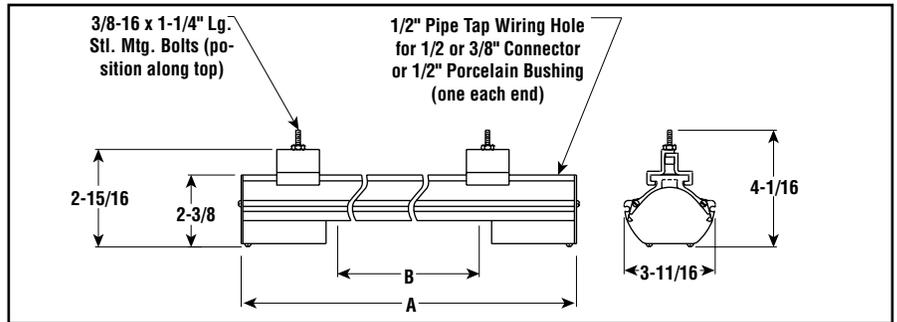

- 3.66 kW/Ft²
- 1.6 - 13 kW
- 120, 208, 240, 275 and 480 Volt
- 3/8" Dia. INCOLOY® Sheath Elements (Type RTU)
- 1500°F Max. Sheath Temp.

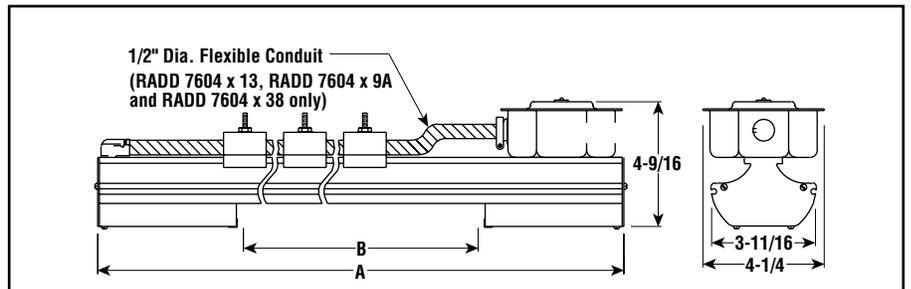

Applications

- Shrink Fitting
- Preheat Glass for Polishing, Drying, Sterilizing
- Fast-Moving Webs

Dimensions (Inches)

Dimensions (Inches)

Features

Complete, Ready-to-Connect Assembly available in various lengths to accommodate work of varying dimensions.

Movable Mounting Clamps and Bolts are supplied to accommodate many mounting configurations such as banks, tunnels and oven sections.

Process Temperature Control — Radiant heater output may be controlled with Chromalox SCR Controllers, Percentage Timing Input Controls and Non-Contact Temperature Sensors. See the Controls section of this catalog.

Additional Sizes and Ratings — Contact your Local Chromalox Sales office for price and availability.

Single Ended Wiring — Heaters may be furnished single-end wired with 18" leads as standard. Add the suffix SE to model number.

Construction

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types.

Rigid Extruded Aluminum Housing protects heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Companion Reflector — Optional radiant companion reflectors improve oven efficiency. See Radiant Accessories in this section.

Pipe Plug — Used to close tapped wiring entry holes. See Radiant Accessories in this section.

Note: Model RADD heaters are not listed for use in fixed electric space heated applications under NEC 424. If they are to be used in such applications, installation must be approved by local code enforcement authorities.

RADD

Two Element Radiant Heater (cont'd.)

Stock Status: S = stock NS = non-stock

To Order—Specify model, PCN, kW, volts, quantity and interlocking connectors (if required).

1. Refer to Tubular Heaters section.
2. Shipped as 480V. Convert to 240V by changing jumpers. (See instructions included with heater.)
3. See Accessories in this section for ordering information.

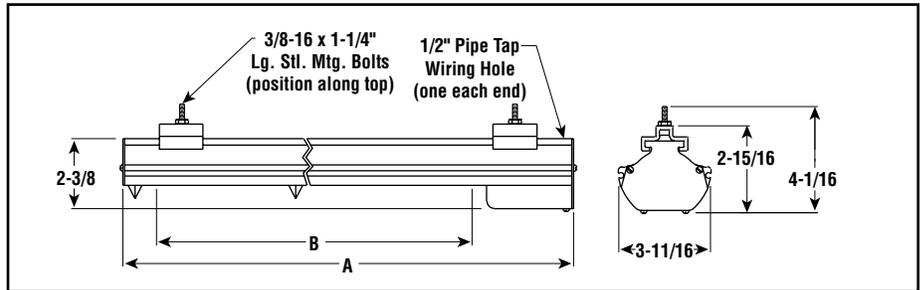

S-RAD

Single Element Radiant Heater

- 2.1 kW/Ft²
- 0.95 - 4.4 kW
- 120, 208, 240 and 275 Volt
- 3/8" Dia. INCOLOY® Sheath Elements (type SRTU)
- 1500°F Max. Sheath Temp.
- Single End Termination

Dimensions (Inches)

Applications

- Resin Curing
- Thermoforming
- Equipment Packaging
- Mirror Manufacturing
- Rubber Curing

Features

Complete, Ready-to-Connect Assembly

available in various lengths to accommodate work of varying dimensions.

Movable Mounting Clamps and Bolts are supplied to accommodate many mounting configurations such as banks, tunnels and oven sections.

Process Temperature Control — Radiant heater output may be controlled with Chromalox SCR Power Controllers, Percentage Timing Input Controls and Non-Contact Temperature Sensors. See the Controls section of this catalog.

Additional Sizes and Ratings — Contact your Local Chromalox Sales office for price and availability.

Construction

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types.

Rigid Extruded Aluminum Housing protects heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Companion Reflector — Optional radiant companion reflectors improve oven efficiency. See Radiant Accessories in this section.

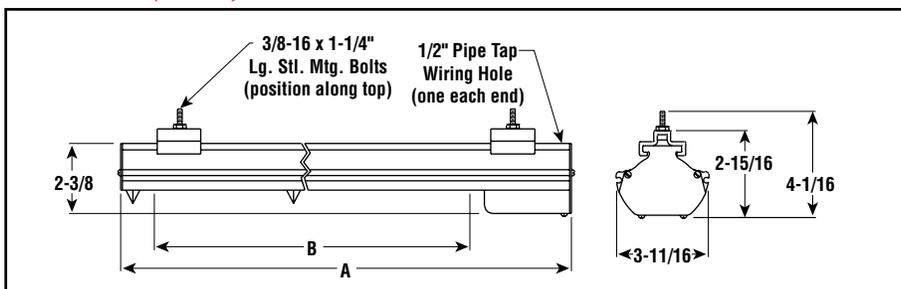

Note: Model S-RAD heaters are not listed for use in fixed electric space heated applications under NEC 424. If they are to be used in such applications, installation must be approved by local code enforcement authorities.

To Order— Specify model, PCN, kW, volts, quantity, optional grille and replacement elements (if needed).

Construction

Hermetically Sealed, Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types.

Rigid Extruded Aluminum Housing protects heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Companion Reflector — Optional radiant companion reflectors improve oven efficiency.

Note: Model RAD-H heaters are not listed for use in fixed electric space heated applications under NEC 424. If they are to be used in such applications, installation must be approved by local code enforcement authorities.

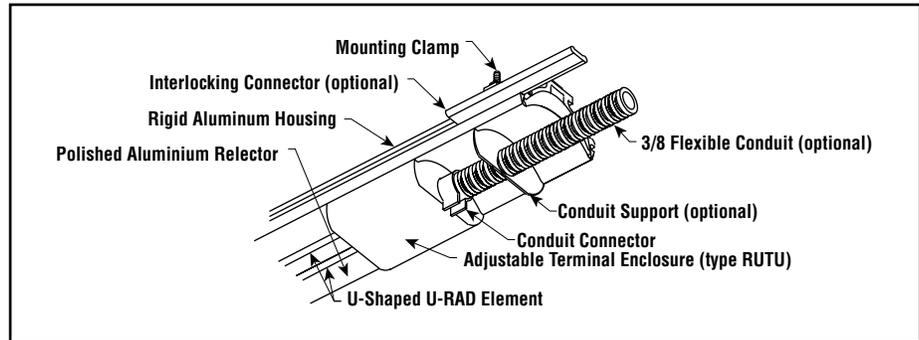

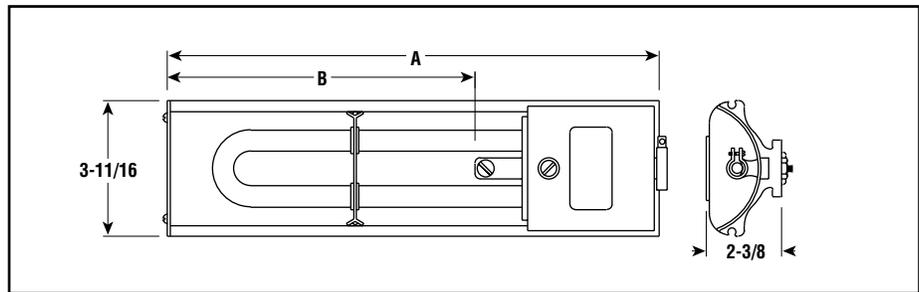

U-RAD[®]

Single Hairpin Element Radiant Heater

- 3.66 kW/Ft²
- 0.8 - 3.6 kW
- 120, 208, 240, 275 and 480 Volt
- 3/8" Dia. INCOLOY[®] Sheath Elements (type UTU)
- 1500°F Max. Sheath Temp.

Dimensions (Inches)

Applications

- Roll Heating
- Shrink Fitting
- Preheat Glass for Polishing, Drying, Sterilizing
- Fast-Moving Webs and other applications where High Temperatures will not damage materials

Features

Complete, Ready-to-Connect Assembly with adjustable terminal housing, which permits easy interchange of elements to accommodate work of varying dimensions.

Movable Mounting Clamps and Bolts are supplied to accommodate many mounting configurations such as banks, tunnels and oven sections.

Process Temperature Control — Radiant heater output may be controlled with Chromalox SCR Power Controllers, Percentage Timing Input Controls and Non-Contact Temperature Sensors. See the Controls section of this catalog.

Additional Sizes and Ratings — Contact your Local Chromalox Sales office for price and availability.

METAL SHEATH
RADIANT

RUTU

Single Hairpin Element Radiant Heater Assembly

- 3.66 kW/Ft²
- 0.8 - 3.6 kW
- 120, 208, 240, 275 and 480 Volt
- 3/8" Dia. INCOLOY® Sheath Elements (type UTU)
- 1500°F Max. Sheath Temp.

Dimensions (Inches)

Applications

- High Intensity Applications
- Fast-Moving Webs and other applications where high temperatures will not damage materials
- Roll Heating
- Shrink Fitting
- Preheat Glass for Polishing, Drying, Sterilizing

Features

Broad Range of Sizes — Used alone or in combination RTU element assemblies offer same range of dimensions as type U-RAD.

Easy Assembly — Units are supplied with element support clips and support bolt and nut (requires drilled hole through reflector and housing) for changing U-RAD heating lengths and for replacing U-RAD elements. RUTU is also used by itself as a radiant heating device by many Chromalox customers.

Construction

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types.

To Order—Specify model, PCN, kW, volts, quantity and replacement elements (if needed).

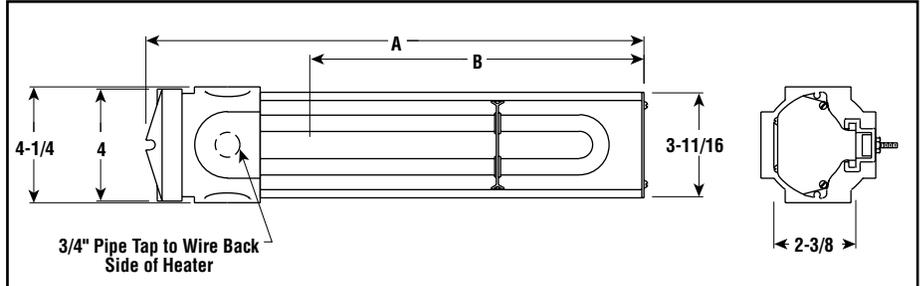

1. Refer to Tubular Heaters section.

U-RAD-LT

Liquid-Tight, Single-Hairpin Element Radiant Heater

Dimensions (Inches)

- 3.66 kW/Ft²
- 0.8 - 3.6 kW
- 120, 208, 240, 275 and 480 Volt
- 3/8" Dia. INCOLOY® Sheath Elements (type UTU-LT)
- 1500°F Max. Sheath Temp.

Applications

- Food Processing
- Water Intake Screens (See Installation Manual for Limitations)
- Conveyor Belt Heating
- Outdoor Comfort Heating
- Facilities Washdown Operations (See Installation Manual for Limitations)
- Winter Applications where element needs to be shielded from strong drafts and wind

Features

Complete, Ready-to-Connect Assembly available in various lengths to accommodate work of varying dimensions.

Movable Mounting Clamps and Bolts are supplied to accommodate many mounting configurations such as banks, tunnels and oven sections.

Special Protective Terminal Cover provides liquid-tight protection to terminals.

Power Connections are made at one end, using high-temperature wire.

Note: Model U-RAD-LT heaters are not listed for use in fixed electric space heated applications under NEC 424. If they are to be used in such applications, installation must be approved by local code enforcement authorities.

Construction

Liquid-Tight Terminal Enclosure for outdoor or hose-down locations.

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types. Element includes bulkhead threaded fittings to ensure a water-tight seal.

Rigid Extruded Aluminum Housing protects heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Companion Reflector — Optional radiant companion reflectors improve oven efficiency. See Radiant Accessories in this section.

Process Temperature Control — Radiant heater output may be controlled with Chromalox SCR Power Controllers, Percentage Timing Input Controls and Non-Contact Temperature Sensors. See the Controls section of this catalog.

Power Connections are made at both ends, using high-temperature wire.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Special Protective Terminal Cover provides liquid-tight protection to terminals.

Construction

Liquid-Tight Terminal Enclosure for outdoor or hose-down locations.

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types. Elements include bulkhead threaded fittings to ensure a water-tight seal.

Rigid Extruded Aluminum Housing protects heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

METAL SHEATH
RADIANT

Stock Status: S = stock NS = non-stock

To Order—Specify model, PCN, kW, volts, quantity, optional grille and replacement elements (if needed).

1. Refer to Tubular Heaters section.

2. See Accessories in this section for ordering information.

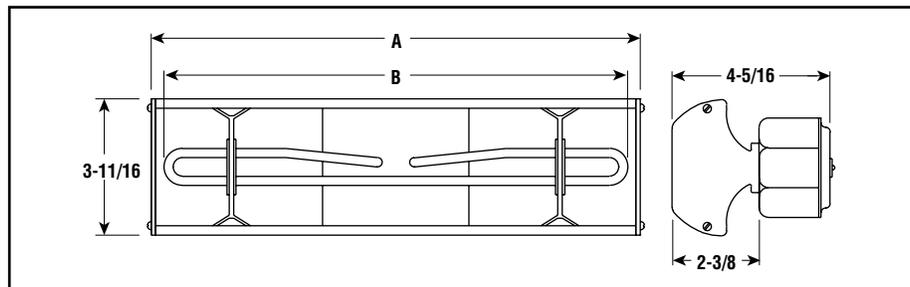

DU-RAD

Single Element, Double-Hairpin Radiant Heater

- 3.66 kW/Ft²
- 1.6 - 7.83 kW
- 120, 208, 240, 275 and 480 Volt
- 3/8" Dia. INCOLOY® Sheath Elements (type UTU)
- 1500°F Max. Sheath Temp.

Dimensions (Inches)

Applications

- Textile and Paper Drying
- Coatings Curing
- Vinyl Fusing
- Preheat Roll Fed Plastics for Laminating or Embossing

Features

More Heated Length for limited space.

Process Temperature Control — Radiant heater output may be controlled with Chromalox SCR Power Controllers, Percentage Timing Input Controls and Non-Contact Temperature Sensors. See the Controls section of this catalog.

Stock Status: S = stock NS = non-stock
To Order—Specify model, PCN, kW, volts, quantity and optional grille (if needed).

For New or Existing Installations — Utilization of a double-hairpin element, with terminal connections in the center of the housing, gives a heated length covering almost the entire length of the housing.

Movable Mounting Clamps and Bolts are supplied to accommodate many mounting configurations such as banks, tunnels and oven sections.

Center Mounted Terminals are enclosed in terminal box on rear of heater housing.

Construction

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types.

Rigid Extruded Aluminum Housing protects heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Companion Reflector — Optional radiant companion reflectors improve oven efficiency. See Radiant Accessories in this section.

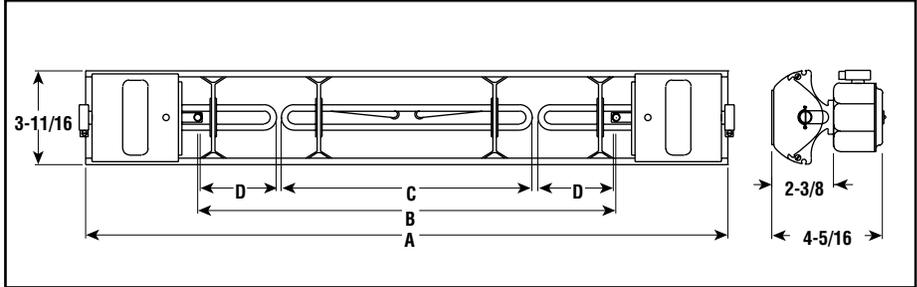

Note: Model DU-RAD heaters are not listed for use in fixed electric space heated applications under NEC 424. If they are to be used in such applications, installation must be approved by local code enforcement authorities.

DU-RAD Three Element Radiant Heater

- 3.66 kW/Ft²
- 3.2 - 15.03 kW
- 120, 240 and 480 Volt
- 3/8" Dia. INCOLOY® Sheath Elements (type UTU)
- 1500°F Max. Sheath Temp.

Dimensions (Inches)

Applications

- Textile and Paper Drying
- Coatings Curing
- Vinyl Fusing
- Preheat Roll Fed Plastics for Laminating or Embossing
- Web Heating where sizes vary in width
- Web Heating and Applications where compensation is needed for end losses

Features

Basic Unit is an extruded aluminum housing that contains one double hairpin-bent radiant heater in center, flanked by two U-shaped elements.

Movable Mounting Clamps and Bolts are supplied to accommodate many mounting configurations such as banks, tunnels and oven sections.

Terminals of end units are in end caps; center mounted terminals are enclosed in terminal box on rear of heater housing.

Process Temperature Control — Radiant heater output may be controlled with Chromalox SCR Power Controllers, Percentage Timing Input Controls and Non-Contact Temperature Sensors. See the Controls section of this catalog.

Construction

Enclosed Chromalox Alloy-Sheath Tubular Heating Element is completely isolated and supported on secondary insulation for improved electrical safety. Designed for long life, the element is more resistant to hard blows than quartz lamp or tube and open coil types.

Rigid Extruded Aluminum Housing protects heating element from harsh industrial environments.

Highly Polished Aluminum Reflectors give good reflectivity and heat transfer, and are easily cleaned to maintain energy efficiency.

Accessories

Protective Grille — Optional snap-in sections help protect personnel and work from contact with hot elements.

Companion Reflector — Optional radiant companion reflectors improve oven efficiency. See Radiant Accessories in this section.

Pipe Plug — Used to close tapped wiring entry holes. See Radiant Accessories in this section.

Stock Status: S = stock NS = non-stock

To Order—Specify model, PCN, kW, volts, quantity, optional grille and replacement elements (if needed).

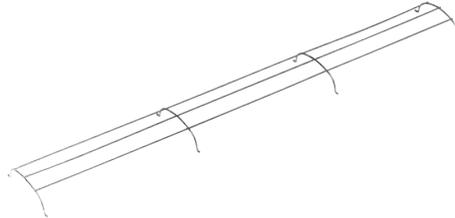

1. Refer to Tubular Heaters section.
2. Refer to Accessories in this section for ordering information.

Process Radiant Heaters Accessories

- Protective Grille
- Companion Reflector
- Terminal Box
- Pipe Plug
- Jumper Strap

Protective Grille

Protective Grille — Type GR snap-in sections help protect personnel or work from direct contact with hot elements.

Ordering Information

Length (In.)	Model	Stock	PCN	Wt. (Lbs.)
8	GR-800	S	111860	0.5

Terminal Box

Use terminal box with radiant heater elements when complete heaters are not required. Provide enclosure for making wiring connections and support for end of elements. These are the end sections of complete heater.

Ordering Information

For Use With	Part No.
Single RTU Element	3-112426
Two RTU Elements	1-112426
One UTU Element	1-112426
Single S-RTU Element	2-118462

Wiring Accessories

Pipe Plug — Use to close 1/2" tapped wiring entry hole in RAD and RADD type heaters. Specify Part No. 1-113863 (PCN 113970).

Jumper Strap — Use to series connect elements in RADD type heaters. Part No. 30-75230 (PCN 867963 or 113996).

METAL SHEATH
RADIANT

CP Series Wide Area Radiant Heaters

- 5 - 25 W/In²
- 0.55 - 18 kW
- 120, 230, 240 and 480 Volt
- 1 & 3 Phase
- 1650°F Max. Emitter Temp.
- 6 - 60" Long x 12 - 30" Wide

Applications

- Ink Drying and Spot Curing for Printing and Silk Screening
- Food Warming
- Moisture Removal in Food Processing
- Plastics Annealing
- Preheat and Postheat Plastics prior to Thermoforming and Punching
- Thermoforming and Vacuum Forming
- Heat Treating Plastic Parts
- Baking or Curing of Lacquers, Semi-Enamels, Enamels, Primers, Phenolics and Epoxies
- Finishing Process of Textiles
- Preheat Printed Circuit Boards

Features

Easy Mounting — Heater can be mounted to radiate in any direction.

Reliable Operation — No reduction in radiant output over life of heater.

Uniform Radiation Pattern Assured with a wide flat infrared surface versus the line pattern given in normal radiant heaters. This eliminates uneven heating of the work and allows uniform heating of a stationary surface such as in an indexing process.

External Reflectors Not Required — The refractory board and bulk insulation behind the heating element help prevent back heat loss. This eliminates the need for external reflectors.

One-Piece Bonded Construction resists damage from vibration and shock.

Overtemperature Control — These units should be controlled such that overheating and premature failure do not occur.

Additional Sizes and Ratings — Contact your Local Chromalox Sales office for price and availability.

Lower Operating Cost with up to 80% of the input energy transmitted to and absorbed by the work material. The maximum amount of radiant energy is transferred to the work with very low heater convection losses. Typical installation distance of two to four inches from the work surface significantly reduces the energy input.

Costly Downtime Minimized — There is no deterioration of the output radiation level with heater life and no reflectors to clean which could cause downtime and increased maintenance costs. The unit is resistant to vibration because of the compact homogeneous construction.

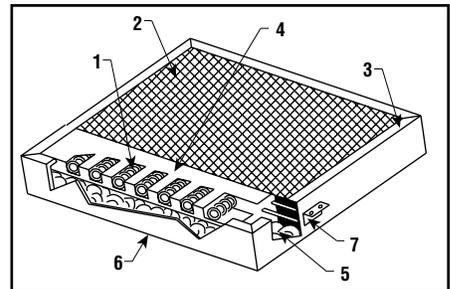

Easy Installation — The light weight building block approach allows for a modular installation which is easily expandable. These rugged panels can be mounted in any direction.

Repeatable Process Performance Assured — Used with closed loop control, the system automatically compensates for ambient temperature ranges and line voltage fluctuations. Maximum energy transfer requires matching the peak wavelength output to the specific material absorption characteristics. Because the peak wavelengths of the flat surface heater are repeatable and adjustable, the quality output of the process is assured.

Construction

1. **Heating Element** — Precision iron base resistance wire, designed to give extended life and uniform emission over entire radiating surface.
2. **Emission Surface** — Woven refractory cloth with black ceramic coating for high radiant energy transfer for CPLI, CPL and CPH type heaters. Aluminum emission surfaces are available for applications such as in the food industry.
3. **Frame** — Heavy gauge, heat resistant, aluminized steel for CPLI, CPL and CPH type heaters.
4. **Heating Element Support** — Fibrous ceramic material, specially developed for high insulation qualities, durability, shock resistance, asbestos free.
5. **Insulation** — High temperature insulation to minimize heat loss from back of heater.
6. **Terminals** — For CPLI, lead-wires are provided on a 2 x 4" junction box. A 2 x 4" junction box with stainless steel terminals is provided for CPL and CPH type heaters.
7. **Thermowell** — Quality tubular quartz thermowell, with strain relief, to accept a Chromalox C-700JU or C-700KU thermocouple on units with suffix T in model number. Standard placement of the thermowell is on side of heater. Specials are available with thermowell exiting back of heater.

Construction

CP Series Wide Area Radiant Heaters (cont'd.)

The CPH, CPL and CPLI are medium wave heaters. Micron levels between 2.5 and 6 of infrared energy are generated. At these micron levels the majority of the infrared energy generated falls into the medium wave section of the infrared spectrum.

Outer edges of the element can have gradual increasing wattage density to compensate for production edge losses.

Single elements or multiple elements can be zoned and wired to achieve specific profiles. Different width materials can be processed by turning off elements.

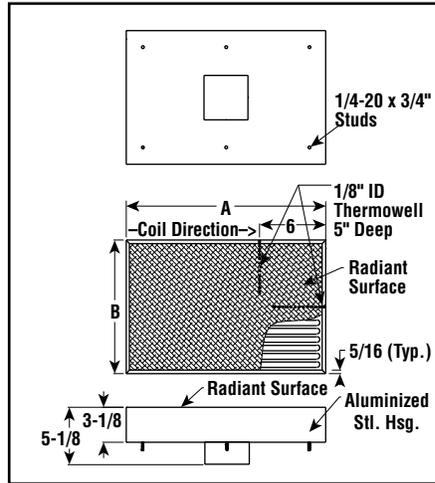

Easy to Control — The use of time proportioning control with closed loop feedback, such as Chromalox 2104 temperature controllers, magnetic contactors or SCR power controllers assure easy and dependable system control. Thermowells may be offered in two locations in the heater interior. Suitable to accept Chromalox standard thermocouples, they sense emitter temperature ensuring accurate wavelength emission. Fast response time of the unit reduces thermal lag.

Overtemperature Control — It is strongly recommended that these units be controlled such that overheating and premature failure do not occur. This is of particular importance in oven usage, where high ambient temperatures exist.

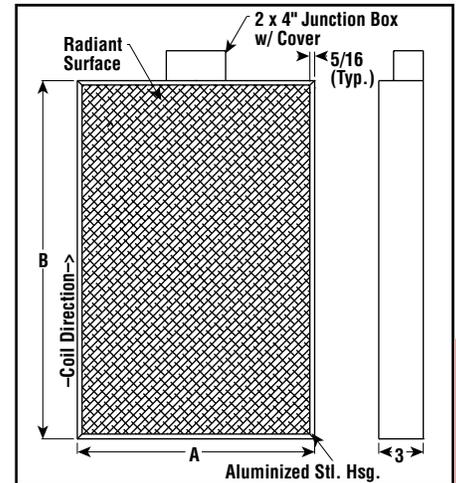

CAUTION — Hazard of Fire. These radiant heaters must not be operated in the presence of flammable vapors, gases or combustible materials without proper ventilation and/or other safety precautions in compliance with either the National Fire Protection Bulletin 86A entitled "Ovens and Furnaces" or the authority having jurisdiction.

CPH & CPL — Dimensions (Inches)

CPLI — Dimensions (Inches)

CPHI

High Intensity Quartz Faced Radiant Heater

- 40 W/In²
- 1.6 - 4.8 kW
- 240 and 480 Volt
- 1 & 3 Phase
- 1750°F Max. Emitter Temp.
- 10" Long x 4 - 12" Wide

Applications

- Moisture Removal from Bottles, Cans and Components
- Drying Automobile Underseal, Adhesives, Lacquer, Printing Ink, Plastic Granules, Pharmaceuticals and Pottery to "biscuit" state
- Nylon and Dye Heat Setting
- Firing Vitreous Enamels
- Soften Plastics prior to Thermoforming
- Soldering and Brazing (i.e., reflow soldering on printed circuit boards)
- Heating for Shrink Fitting
- Sealing Glass to Metal
- Shrink and Blister Packaging
- Curing and Baking of PTFE coatings, mirror backings, PVC foil prior to lamination, resin coatings on paper, metal textiles and wood, paint finishes including powder coatings and enamel, shoe adhesives and fillings, latex backing for carpet
- Brown Food prior to Freezing
- Wherever Close Maximum Heat is Required, such as Process Boosting

Features

Highest Watt Density Available of any Medium Wave Infrared Radiant Panel Heater

— Due to thermal and electrical properties of the grooved quartz face plate, CPHI has the highest watt density (5.76 kW/Ft²) of any medium wave infrared radiant panel.

Uniform Radiation Pattern Assured with a wide flat infrared surface versus the line pattern given in normal radiant heaters. This eliminates uneven heating of the work and allows uniform heating of a stationary surface such as in an indexing process.

Lower Operating Cost with up to 80% of the input energy transmitted to and absorbed by the work material. The maximum amount of radiant energy is transferred to the work with very low heater convection losses. Typical installation distance of two to four inches from the work surface significantly reduces the energy input.

External Reflectors Not Required — The refractory board and bulk insulation behind the heating element help prevent back heat loss. This eliminates the need for external reflectors.

Costly Downtime Minimized — There is no deterioration of the output radiation level with heater life and no reflectors to clean which could cause downtime and increased maintenance costs. The unit is resistant to vibration because of the compact homogeneous construction.

Easy Installation — The light weight building block approach allows for a modular installation which is easily expandable.

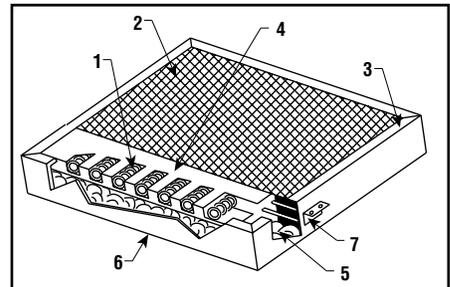

Note — CPHI heaters mount only so that the coil direction is in the horizontal plane.

Repeatable Process Performance Assured — Used with closed loop control, the system automatically compensates for ambient temperature ranges and line voltage fluctuations. Maximum energy transfer requires matching the peak wavelength output to the specific material absorption characteristics. Because the peak wavelengths of the flat surface heater are repeatable and adjustable, the quality output of the process is assured.

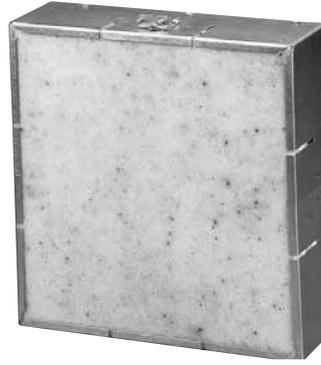

Construction

1. **Heating Element** — Precision iron base resistance wire, designed to give extended life and uniform emission over entire radiating surface.
2. **Emission Surface** — Grooved fused quartz face plate for CPHI type heaters. Special ratings with aluminum emission surfaces are available for applications such as in the food industry.
3. **Frame** — Heavy gauge, heat-resistant aluminized steel.
4. **Heating Element Support** — Fibrous ceramic material specially developed for high insulation qualities, durability, shock resistance, asbestos free.
5. **Insulation** — High temperature insulation to minimize heat loss from back of heater.
6. **Terminals** — Stainless Steel terminals in a 4 x 4" junction box are provided with CPHI type heaters.
7. **Thermowell** — Quality tubular quartz thermowell, with strain relief, to accept a Chromalox C-700JU or C-700KU thermocouple on units with suffix T in model number. Standard placement of thermowell is on side of heater. Specials are available with thermowell exiting back of heater.

Construction

CPHI High Intensity Quartz Faced Radiant Heater *(cont'd.)*

CPHI heaters produce micron levels between 2.5 and 6.0. At these micron levels the majority of the CPHI heaters fall into the middle of the IR spectrum, categorizing them as medium wave heaters.

Single heating elements or multiple elements can be zoned and wired to achieve specific heating profiles.

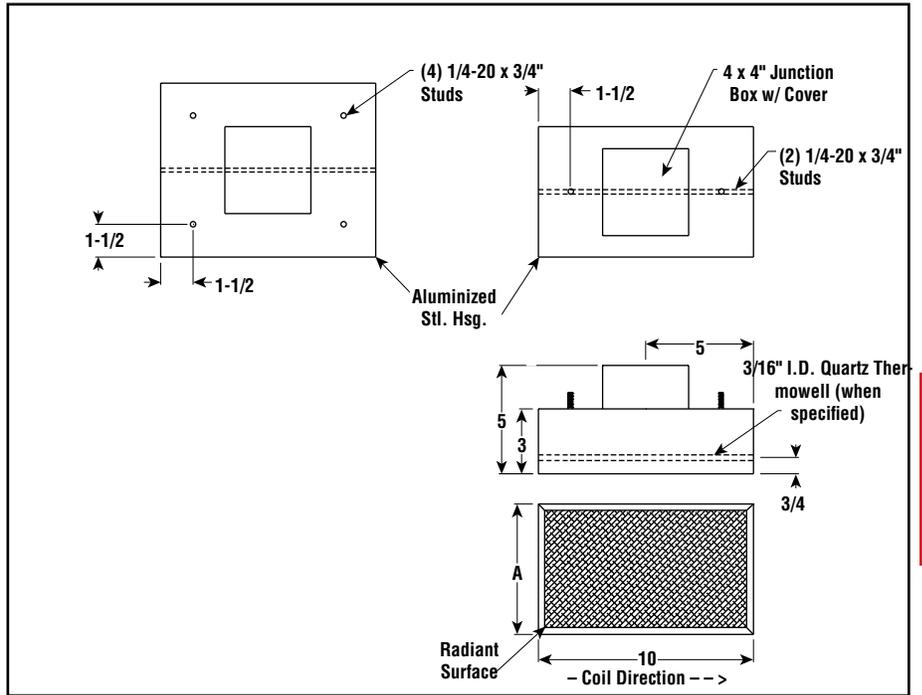

Outer edges of the element can have gradual increasing watt density to compensate for production edge losses.

Easy to Control — The use of time proportioning control with closed loop feedback, such as Chromalox 2104 temperature controllers, magnetic contactors or SCR power controllers assure easy and dependable system control. Thermowells may be offered in two locations in the heater interior. Suitable to accept Chromalox standard thermocouples, they sense emitter temperature ensuring accurate wavelength emission. Fast response time of the unit reduces thermal lag.

Overtemperature Control — It is strongly recommended that these units be controlled such that overheating and premature failure do not occur. This is of particular importance in oven usage, where high ambient temperatures exist.

CAUTION — Hazard of Fire. These radiant heaters must not be operated in the presence of flammable vapors, gases or combustible materials without proper ventilation and/or other safety precautions in compliance with either the National Fire Protection Bulletin 86A entitled "Ovens and Furnaces" or the authority having jurisdiction.
