Replacement Pipe Insert Heater Elements

If it's safe, reliable and efficient ... it must be PHCo

Heater elements are readily available in lengths from two feet to forty feet and can be custom sized to match both heating requirements and tank dimensions. Single and three-phase elements can be furnished. Elements are constructed of nickel chromium alloy coils that are supported by patented ceramic insulators. Elements can be flexed to a minimum radius of 24" for insertion in confined areas. PHCo Elements will work for new applications or for replacing existing pipe insert elements that have failed. They can also be used if electric requirements change and if different voltage, wattage or phase is needed.

**For Tubes Up To Four
Inches In Diameter,
Two To Forty
Foot Lengths**
